

# **ADMINISTRATOR** **DASHBOARD**

Andrea Seguya

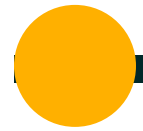

# Project Timeline

Andrea Seguya

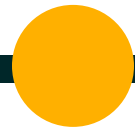

# Project Overview

The administrator has access to edit and format information from the tables and database as well as visually analyse data.

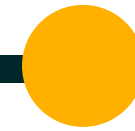

## **Products**

The products tab displays info about products

## **Users**

The Users tab displays information about employees and allows the admin to edit User information

## **Sales**

The Sales tab displays information about sales, profits and investments

# Operation Strategy

## 01 Admin

The dashboard works as a GUI for the database. The admin is able to view statistics about the information on the database

## 02 Dashboard

The dashboard displays current information from the database and submits the user's changes to the server to update the database

## 03 Server

The GUI uses PHP to record responses and store them to the server for updates
